In this book, you will learn how to build Python web applications from scratch. You will start by learning the basics of Python web development, such as how to create a web server and how to handle HTTP requests. You will then learn how to use Python frameworks, such as Django and Flask, to build more complex web applications.

You will also learn how to secure your Python web applications and how to make them performant and scalable. By the end of this book, you will have the skills and knowledge you need to build powerful and reliable Python web applications.

What You Will Learn

- The basics of Python web development
- How to use Python frameworks, such as Django and Flask
- How to secure your Python web applications
- How to make your Python web applications performant and scalable

Who This Book Is For

This book is for anyone who wants to learn how to build Python web applications. Whether you are a beginner or an experienced developer, this book will teach you everything you need to know to build robust and reliable web applications.

About the Author

[Author's name] is a software engineer with over 10 years of experience. He has worked on a variety of projects, from small startups to large enterprises. He is passionate about building high-quality software and sharing his knowledge with others.
