

# Effectively Secure Your Linux Systems With SELinux 2nd Edition

## The Definitive Guide to SELinux

SELinux (Security-Enhanced Linux) is a powerful security module that can be used to protect Linux systems from malicious attacks. SELinux uses a mandatory access control (MAC) model to enforce security policies, which means that all access to system resources is controlled by SELinux. This makes it very difficult for attackers to gain unauthorized access to your system.

## SELinux System Administration: Effectively secure your Linux systems with SELinux, 2nd Edition
